

H³ - Health Harbor Hamburg

What is H³?

H³ is a shared digital network for Hamburg. Participating H³ institutions are connected via interfaces to enable the location-independent exchange of treatment and imaging data.

The aim is to improve collaboration within Hamburg's healthcare system and make it more patient-centred.

As a patient, how do you benefit from H³?

No more CDs

No more image data on CD. We'll digitise the process for you.

Direct access

Your treatment and medical imaging data will be available directly at the other hospital (with your consent) should you seek treatment there.

Avoiding duplicate examinations through digital records

Thanks to improved connectivity, your medical history is available digitally at all times – without the need for bulky filing cabinets.

What happens to your data?

Hospital A

ADMISSION

-  Your H³-consent*
-  The examination generates treatment data

Data provision

Treatment data is made available to H³ facilities and can be exchanged between them.

No additional central data storage.

Hospital B

ADMISSION

-  Renewed H³-consent*
-  Access to your relevant medical records

Benefit directly from the Hamburg Health Network.

* **Important information:** By giving your H³ consent, you are granting the other participating H³ institutions permission to access your treatment and imaging data. For further information and a full list of all participating H³ institutions, please refer to the official H³ Data Protection and Patient Information document, which you can obtain from the relevant participating H³ institution.

The project was launched with funding from the Hamburg Authority for Health, Social Affairs and Integration (Social Affairs Authority) and the Federal Social Security Office (BAS).
